

Dear Pierre Auger and other female colleagues in Cosmic Rays and High Energy Astrophysics,

**The 2023 International Day of the Women & Girls in Science arrived.**

**Happy Day for all women in Pierre Auger Observatory and all the women working in Physics**

As every year, Pierre Auger Observatory is part of the Institutions that keep the flame for women's rights burning and extreme efforts for the inclusion and recognition of the role of women in the Observatory and beyond.

In the recent update of the Pierre Auger Visitor Center, two videos (Nobel Women and Women in Auger) highlight the importance of continuing to work on this topic, so that more women and girls join scientific and technological activities.

This year, for celebrating the International Day of Women and Girls in Science, we invite you to participate in two activities (or just in one of them):

- To share with us a short video (maximum 3 minutes) or a text (maximum half page plus a pic) describing your everyday life and how you combine it with the work in science you do.
- To share with us stories where you describe other activities you do in addition to your work. These can be hobbies, or other activities which are not necessarily related to science but they are part of your life as well. Please feel free to choose the way of sharing the information, it can be as a short text, a short video, an audio, a pic, etc.

The contributions can be sent from February 11th to November 1st of 2023, to

Beatriz Garcia: [beatriz.garcia@iteda.cnea.gov.ar](mailto:beatriz.garcia@iteda.cnea.gov.ar)

Karen Caballero: [karen.scm@gmail.com](mailto:karen.scm@gmail.com)

The received material will be published on the Pierre Auger website and, if you give your agreement, also distributed in episodes using our social networks.

If the contribution is a video, you can send it in English or your own language, and we will try to add subtitles.

We hope you join us in this proposal which will produce material to disseminate the work of the Women in Sciences around the planet!
